Aswanth Maroli

Automation QA Engineer | Playwright, Selenium, REST
Assured, Jmeter | UI & API Automation | CI/CD (Azure
DevOps, Jenkins) | Reducing Defects & Accelerating Releases
Kochi, Kerala, India

Summary

I'm an Automation QA Engineer who treats quality like an engineering problem, not a checkbox. I break systems early, automate what matters, and help teams ship faster with confidence. I specialize in catching high-impact defects before they ever reach production.

I bring 3+ years of hands-on experience building and scaling UI & API automation using Playwright, Selenium, TestNG, Cypress and REST Assured across CMS platforms, incident management systems, financial document tools, and event-based applications. I've integrated automated tests into Azure DevOps CI/CD pipelines, Jenkins and executed API and performance testing (Rest Assured, Postman, JMeter), and partnered closely with developers in Agile teams. My work has helped cut production defects by ~70%, improve regression speed, and strengthen release quality.

I'm focused on growing into a strong SDET / Senior Automation role, where I can design automation-first strategies, push API-driven testing, and build scalable, reliable test architectures. If you're building serious products and care about quality that actually scales, we should talk.

Experience

Smart Hatch Technologies FZE
Quality Analyst
July 2025 - Present (7 months)
Kochi, Kerala, India

▸ Testing CMS workflows and incident & call management systems used in real-world operational environments

- Designed and executed UI automation scripts using Selenium + TestNG, reducing repetitive manual testing and improving coverage of critical user flows
- Performed API automation using REST Assured, validating request/response payloads, authentication, headers, and business rules
- Executed end-to-end manual testing (functional, regression, exploratory, cross-browser) across web and mobile applications
- Identified, logged, and tracked defects in JIRA, ensuring timely fixes through retesting and regression validation
- Collaborated closely with developers and stakeholders to ensure quality across releases in Agile workflows

Approcker Technologies Pvt Ltd

Software Test Engineer

January 2023 - June 2025 (2 years 6 months)

Kochi, Kerala, India

As a QA Automation Tester, I focus on ensuring software quality through efficient automation testing strategies. I collaborate closely with developers, product managers, and stakeholders to deliver high-performing, bug-free applications.

Key Responsibilities:

Test Automation Development – Designing and implementing automation frameworks using Playwright, and Cypress to improve testing efficiency.

API Testing & Automation – Validating backend services with Postman and Playwright API testing, ensuring smooth integrations.

Performance Testing – Conducting load and stress testing using JMeter to assess system reliability under different conditions.

Continuous Testing – Integrating test automation into CI/CD pipelines using Azure DevOps for faster and more reliable releases.

Manual Testing – Conducting functional, regression, and exploratory testing to identify critical issues.

Collaboration & Agile Practices – Working in Agile environments, participating in sprint planning, and ensuring seamless communication between teams.

Key Achievements:

Reduced manual testing effort through effective automation strategies.

Improved API response validation efficiency using automated API tests.
Enhanced application performance by identifying and resolving bottlenecks in load testing.
Successfully integrated automated tests into CI/CD pipelines, speeding up release cycles.

Education

Manipal University Jaipur

Bachelor's degree, Computer Applications · (October 2024 - September 2027)

Luminar Technolab

NACTET Certification in Software Testing · (May 2020 - September 2020)

Govt. Polytechnic College

Diploma of Education, Diploma in Wood and Paper Technology · (September 2017 - April 2020)
